**Lecture 6-10**

Prove:  $\neg q \rightarrow \neg p \vdash p \rightarrow q$

Solution:

1.	$\neg q \rightarrow \neg p$	premise
2.	$p$	assumption
3.	$\neg \neg p$	$\neg \neg i$ 2
4.	$\neg \neg q$	MT 3,1
5.	$q$	$\neg \neg e$ 4
6.	$p \rightarrow q$	$\rightarrow i$ 2-5

Consider,

1.	$p$	assumption
2.	$p \rightarrow p$	$\rightarrow i$ 1-1

Above is a poof of the statement  $\vdash (p \rightarrow p)$

*Def: A logical formula  $\phi$  with a valid sequent  $\vdash \phi$  is called a **Theorem**.*

*Remarks: Any sequent  $\phi \vdash \psi$  is equivalent to  $\vdash \phi \rightarrow \psi$ .*

Proof of  $\vdash \phi \rightarrow \psi$ :

1.	$\phi$	assumption
2.		
.		
.		
n.	$\psi$	$\langle \rangle$

$\phi \rightarrow \psi \rightarrow i$  1-n (n+1)

Remark(b):  $\phi_1, \phi_2, \dots, \phi_n \vdash \psi$  is equivalent to  $\vdash \phi_1 \rightarrow (\phi_2 \rightarrow (\dots (\phi_n \rightarrow \psi)))$

## 5 Rules for Disjunction

### 5.1 OR-Introduction

$$\frac{\phi}{\phi \vee \psi} \vee_{i1}$$

$$\frac{\phi}{\psi \vee \phi} \vee_{i2}$$

### 5.2 OR-Elimination

$$\frac{\phi \vee \psi \quad \begin{array}{|c|c|} \hline \phi & \psi \\ \hline \cdot & \cdot \\ \cdot & \cdot \\ \chi & \chi \\ \hline \end{array}}{\chi} \vee_e$$

Prove:  $p \vee q \vdash q \vee p$

$$\begin{array}{l} 1. p \vee q \quad \text{premise} \\ \hline \begin{array}{l} 2. q \quad \text{assumption} \\ 3. q \vee p \quad \vee_{i2} 2 \end{array} \\ \hline \begin{array}{l} 4. q \quad \text{assumption} \\ 5. q \vee p \quad \vee_i 4 \end{array} \\ \hline 6. q \vee p \quad \vee_e 1, 2-3, 4-5 \end{array}$$

Prove:  $q \rightarrow r \vdash p \vee q \rightarrow p \vee r$

$$\begin{array}{l} 1. q \rightarrow r \quad \text{premise} \\ \hline \begin{array}{|c|} \hline \begin{array}{l} 2. p \vee q \quad \text{assumption} \\ \hline \begin{array}{|c|} \hline \begin{array}{l} 3. p \quad \text{assumption} \\ 4. p \vee r \quad \vee_i 3 \end{array} \\ \hline \begin{array}{|c|} \hline \begin{array}{l} 5. q \quad \text{assumption} \\ 6. r \quad \rightarrow e 5, 1 \\ 7. p \vee r \quad \vee_{i2} 6 \end{array} \\ \hline 8. p \vee r \quad \vee_e 2, 3-4, 5-7 \end{array} \\ \hline \end{array} \end{array} \\ \hline 9. (p \vee q) \rightarrow (p \vee r) \quad \rightarrow i 2-8 \end{array}$$

### 5.3 “Copy” Rule

$$\begin{array}{c}
 \perp p \rightarrow (q \rightarrow p) \\
 \boxed{
 \begin{array}{c}
 1.p \quad \text{assumption} \\
 \boxed{
 \begin{array}{c}
 2.q \quad \text{assumption} \\
 3.p \quad \mathbf{copy\ 1}
 \end{array}
 } \\
 4.q \rightarrow p \quad \rightarrow i\ 2-3
 \end{array}
 } \\
 5.p \rightarrow (q \rightarrow p) \quad \rightarrow i\ 1-4
 \end{array}$$

## 6 Rules for Negation

### 6.1 Contradiction

- Contradictions are expressions of the form  $\phi \wedge \neg\phi$  or  $\neg\phi \wedge \phi$  where  $\phi$  is any proposition.
- $\perp$  represents a contradiction.
- Any proposition can be derived from contradiction.

### 6.2 Bottom Elimination

$$\frac{\perp}{\psi} \perp e$$

### 6.3 Not Elimination

$$\frac{\phi \quad \neg\phi}{\perp} \neg e$$

*Example:* Prove  $\neg p \vee q \vdash p \rightarrow q$  is valid.

$$\begin{array}{l}
1. \neg p \vee q \quad \text{premise} \\
\boxed{
\begin{array}{l}
2. \neg p \quad \text{assumption} \\
\boxed{
\begin{array}{l}
3. p \quad \text{assumption} \\
4. \perp \quad \neg e 3, 2 \\
5. q \quad \perp e 4 \\
6. p \rightarrow q \quad [\rightarrow i 3 - 5]
\end{array}
\end{array}
} \\
\boxed{
\begin{array}{l}
7. q \quad \text{assumption} \\
\boxed{
\begin{array}{l}
8. p \quad \text{assumption} \\
9. q \quad \text{from 7} \\
10. p \rightarrow q \quad [\rightarrow i 8 - 9]
\end{array}
\end{array}
} \\
11. p \rightarrow q \vee \quad 1, 2 - 6, 7 - 10
\end{array}$$

## 6.4 Negation Introduction and Proof by Contradiction

### 6.4.1 Negation Introduction

$$\frac{
\boxed{
\begin{array}{c}
\phi \\
\cdot \\
\cdot \\
\cdot \\
\perp
\end{array}
}
}{\neg \phi} \neg i$$

### 6.4.2 Proof By Contradiction (Reductio Ad Absurdum)

$$\frac{
\boxed{
\begin{array}{c}
\neg \phi \\
\cdot \\
\cdot \\
\cdot \\
\perp
\end{array}
}
}{\phi} PBC$$

*Example:* Prove the following sequent is valid.

$$p \rightarrow q, p \rightarrow \neg q \vdash \neg p$$

*Solution:*

1.	$p \rightarrow q$	premise
2.	$p \rightarrow \neg q$	premise
3.	$p$	assumption(3)
4.	$q$	$\rightarrow e$ 3,1
5.	$\neg q$	$\rightarrow e$ 3,2
6.	$\perp$	$\neg e$ 4,5
7.	$\neg p$	$\neg i$ 3-6

*Example:* Prove  $p \rightarrow (q \rightarrow r), p, \neg r \vdash \neg q$  is valid, without using MT.

*Solution:*

1.	$p \rightarrow (q \rightarrow r)$	premise
2.	$p$	premise
3.	$\neg r$	premise
4.	$q$	assumption
5.	$q \rightarrow r$	$\rightarrow e$ 2,1
6.	$r$	$\rightarrow e$ 4,5
7.	$\perp$	$\neg e$ 3,6
8.	$\neg q$	$\neg_i$ 4-7

## 7 Derived Rules

MT can be derived from  $\rightarrow e, \neg e$  and  $\neg_i$ .

1.	$\phi \rightarrow \psi$	premise
2.	$\neg \psi$	premise
3.	$\neg \phi$	assumption)
4.	$\neg \psi$	$\rightarrow e$ 3,1
5.	$\perp$	$\neg e$ 2,4
6.	$\neg \phi$	$\neg_i$ 3 - 5

## 8 Law of the Excluded Middle (LEM)

- It is also called as Tertium non datur. ( There is no third possibility)
- Says that  $\phi \vee \neg \phi$  is always true.

$$\vdash \phi \vee \neg\phi$$

1.	$\neg(\phi \vee \neg\phi)$	assumption
2.	$\phi$	assumption
3.	$\phi \vee \neg\phi$	$\vee_i 2$
4.	$\perp$	$\neg e 3,1$
5.	$\neg\phi$	$\neg_i 2-4$
6.	$\phi \vee \neg\phi$	$\vee_{i2} 5$
7.	$\perp$	$\neg e 6$
8.	$\phi \vee \neg\phi$	PBC 1-7

Example: Using LEM, show that  $p \rightarrow q \vdash \neg p \vee q$  as valid.

1.	$p \rightarrow q$	premise
2.	$p \vee \neg p$	LEM
3.	$p$	assumption
4.	$q$	$\rightarrow e 3,1$
5.	$\neg p \vee q$	$\vee_{i2} 4$
6.	$\neg p$	assumption
7.	$\neg p \vee q$	$\vee_i 6$
8.	$\neg p \vee q$	$\vee_e 2,3-5,6-7$

## 9 Provable Equivalence

- $\phi$  and  $\psi$  are provable equivalent if and only if the sequents  $\phi \vdash \psi$  and  $\psi \vdash \phi$  are valid.
- It is denoted by  $\phi \dashv\vdash \psi$ .
- Ultimately we could define the  $\phi \dashv\vdash \psi$  as  $\vdash (\phi \rightarrow \psi) \wedge (\psi \rightarrow \phi)$ .

$$\neg(p \rightarrow q) \vdash p \wedge \neg q$$

$$1. \neg(p \rightarrow q) \quad \text{premise}$$

$2. \neg(p \wedge \neg q) \quad \text{assumption}$ <table border="1" style="border-collapse: collapse; width: 100%;"> <tr> <td style="padding: 5px;"> <math>3. p \quad \text{assumption}(3)</math> <table border="1" style="border-collapse: collapse; width: 100%;"> <tr> <td style="padding: 5px;"> <math>4. \neg q \quad \text{assumption}</math> </td></tr> <tr> <td style="padding: 5px;"> <math>5. p \wedge \neg q \quad \wedge_i 3,4</math> </td></tr> <tr> <td style="padding: 5px;"> <math>6. \perp \quad \neg e 2,5</math> </td></tr> </table> </td></tr> <tr> <td style="padding: 5px;"> <math>7. q \quad \text{PBC 4-6}</math> </td></tr> </table>	$3. p \quad \text{assumption}(3)$ <table border="1" style="border-collapse: collapse; width: 100%;"> <tr> <td style="padding: 5px;"> <math>4. \neg q \quad \text{assumption}</math> </td></tr> <tr> <td style="padding: 5px;"> <math>5. p \wedge \neg q \quad \wedge_i 3,4</math> </td></tr> <tr> <td style="padding: 5px;"> <math>6. \perp \quad \neg e 2,5</math> </td></tr> </table>	$4. \neg q \quad \text{assumption}$	$5. p \wedge \neg q \quad \wedge_i 3,4$	$6. \perp \quad \neg e 2,5$	$7. q \quad \text{PBC 4-6}$
$3. p \quad \text{assumption}(3)$ <table border="1" style="border-collapse: collapse; width: 100%;"> <tr> <td style="padding: 5px;"> <math>4. \neg q \quad \text{assumption}</math> </td></tr> <tr> <td style="padding: 5px;"> <math>5. p \wedge \neg q \quad \wedge_i 3,4</math> </td></tr> <tr> <td style="padding: 5px;"> <math>6. \perp \quad \neg e 2,5</math> </td></tr> </table>	$4. \neg q \quad \text{assumption}$	$5. p \wedge \neg q \quad \wedge_i 3,4$	$6. \perp \quad \neg e 2,5$		
$4. \neg q \quad \text{assumption}$					
$5. p \wedge \neg q \quad \wedge_i 3,4$					
$6. \perp \quad \neg e 2,5$					
$7. q \quad \text{PBC 4-6}$					
$8. p \rightarrow q \quad \rightarrow i 3-7$					
$9. \perp \quad \neg e 8,1$					

$$10. p \wedge \neg q \quad \text{PBC 2-9}$$
